

LEE GARVERICK

Lee Garverick is the founder of a product management consulting company focused on space and Internet of Things. She is passionate about delivering the product designs needed to realize the vast potential of today's space and industrial internet of things industries.

Lee is an expert in finding and solving the right problems, growing startup technology companies, and delivering great software. She applies meticulous focus to product definition, user experience, design, documentation, and go-to market, and unites the company around the product vision. With over three decades of experience in technology entrepreneurship, she has been a leader for projects ranging from Internet of Things to distributed systems to educational games.

Prior to starting her consulting company, she built and led product and marketing teams for LeoLabs, Inseego IoT and DMS, Nexsan, Connected Data, Ricoh eWriter Solutions, Groupvine, HP, and a joint venture between Apple and IBM called Taligent. Lee also ran a boutique technology marketing company for over ten years, serving Silicon Valley clients ranging from nascent startups to HP and Sun Microsystems. She began her career writing educational computer games for the Apple II.

Lee is a proud Aggie – she received a B.S. in Computer Science and Mathematics from UC Davis.
